
EVENT MANAGEMENT SYSTEM

- The Event Management System ensures the effective and secure exchange of information between users and devices, ensuring the opportunity to make use of decentralized information for missions of a variety of type and scope.

- The Event Management System is a modular system with the ability to securely integrate a variety of stationary and mobile sensors as well as external systems to gain a multi-faceted view of all activities occurring during the time of the mission.

System user interfaces: a website and an individually-accessed application available on the Android platform. The system visualizes user and device-generated information on a map, as well as offers the functionality for textual information exchange. Access to the system is possible through smartphones, tablets, stationary computers, and laptops.

Only authenticated users using two-factor authentication are able to log in to the system.

The system's implemented sensors: GPS trackers, and the Intelligent System for Object Recognition (ISOR), which can also be integrated onto an unmanned aircraft (drone) platform. Other sensors can be added...
