
FORESTRADAR

➤ Our unique ForestRadar Change detection technology uses a combination of Synthetic Aperture Radar (SAR) satellite data, multispectral optical satellite imagery and Machine Learning (ML) algorithms to precisely detect new clear-cut, fire-burnt and wind-fall areas in forests.

ForestRadar

➤ Our unique ForestRadar Change detection technology uses a combination of Synthetic Aperture Radar (SAR) satellite data, multispectral optical satellite imagery and Machine Learning (ML) algorithms to precisely detect new clear-cut, fire-burnt and wind-fall areas in forests.

ForestRadar Change detection advantages:

- Detects clear-cuts, wind-falls, fire burnt areas
- Weekly change alerts (SMS, WhatsApp, e-mail)
- Small detection areas – starting from 0.25 ha
- Very high accuracy – 95%
- Result polygons delivered in any vector format
- Validated technology and accuracy

Please, request demo service by writing to info@forestradar.com
