
MOBOTIX THERMAL CAMERAS

> High - precision and security cameras

- > Mobotix thermal cameras use thermal imaging to monitor temperature and conduct surveillance under various conditions. Mobotix thermal cameras are high-precision and security cameras that use thermal imaging to monitor temperature and conduct surveillance under various conditions. These cameras are designed for use in multiple industries, including industrial sectors, security systems, and healthcare. Thermal imaging is a non-contact imaging process that allows the detection of infrared heat radiation, which is invisible to the human eye. Temperature is typically represented on a scale ranging from red (hot) to yellow (warm) and blue (cold). Other possible imaging options include black and white or false colors like amber. Mobotix thermal cameras are EN 54-10 certified, ensuring reliable and early detection of fire sources.
